Stem Cell Therapeutics – The Future of Health Care

Regenerative Medicine promises to overhaul much of healthcare as we know it! Pfizer has allocated \$100M for research and commercialization of stem cell therapeutics. ABCtech has selected this emerging technology as potentially disruptive, and with AHIA as co-Host, has organized two events for demystifying the science and enhancing public awareness. Learn how Alberta will fare and what stem cell therapeutics may mean to you! Printable event posters are included on pages 2 and 3.

Industry Services

ABCtech is seeking financing to launch three new Programs: 1) A program for conducting focus groups across the province for assessing the status of commercialization – techPulse, 2) scanning the globe and the province for potentially disruptive emerging technologies – techScan, and 3) techStatus – production of an annual magazine featuring new enterprises and a status report on the commercialization of technologies in Alberta. Direct your comments to info@ABCtech.ca View the DRAFT Proposal in the Library at www.ABCtech.ca

Website – www.ABCtech.ca

The ICT Council has been asked for support to develop www.ABCtech.ca as a provincial technologies portal with industry applications including: current news and an events calendar, news release services, document archiving, job postings, a Networking Newsletter and event registration and on-line payment processing. A sponsorship sales campaign is expected in 2009 for sale of site-, newsletter- and event advertising.

Featured Entrepreneur – Managing RFID technology

DBiTS offers an advanced Radio Frequency Identification (RFID) application for mass data management featuring an RF reader range that extends beyond anything in the industry today. DBiTS architectural solutions and integration support for inventory management systems applies across several industry sectors where asset/inventory management are core to their business, including: warehousing, oil field services, medical services, transportation, and conventions.

DBiTS applications are superior in effectively tracking corporate assets for: asset management, supply chain management and inventory control. DBiTS helps reduce inventory related losses that are often as high as 30% of asset value.

DBiTS uses High Band UHF RFID systems and GEN 2 Tags based on Alien Technologies with a range of up to 5 Meters. The system is capable of using other hardware as well. Key to the DBiTS RFID Plus solution is its unique RFID server which integrates tracking information with existing data management systems.

DBiTS has recently completed its first round of financing, is a recipient of the AB Government's new voucher program and is field testing (with support from TR Labs) the RFID application with strategic suppliers in need of improved inventory management. DBiTS product development is located in Vulcan with headquarters in Calgary.
